The importance of protecting significant buildings from decay and destruction would seem to be undeniable. Yet whilst the majority of buildings of merit constructed before the Second World War have been highlighted as worthy of protection there is much indifference, and in some cases hostility towards many important post-war buildings. These deserve to receive wider formal recognition but in many cases continue to be mistreated or even demolished.

This book examines many of the philosophical and practical issues surrounding the conservation of modern buildings. It also considers the problems faced by building practitioners in dealing with buildings constructed in a wider range of styles and materials than at any other time. Climate change in particular has forced a re-assessment of the way in which we think about buildings. The pressures to address issues of energy efficiency have become more urgent and are likely to have consequences that may alter the perceived architectural and historic interest of modern and traditional buildings alike.

Preserving Post-War Heritage

The Care and Conservation of Mid-Twentieth-Century Architecture

Edited by Susan Macdonald

This international collection of papers examines the specific management and practical issues relating to post-war construction which are commonly encountered by conservation professionals. Part I deals with the historical context and the framework for protection of post-war architecture in Britain. Part II examines structural issues, materials and services, with particular emphasis on diagnosis and assessment of problems and the options for repair. The topics covered include reinforced concrete, plastics, services, clad frame construction and curtain walling.

Principles and Practice in Conserving Recent Architecture

Modern Matters

Principles and Practice in Conserving Recent Architecture

This book considers continuing developments in the protection and care of twentieth-century buildings and examines the philosophical, methodological and practical problems associated with conserving our recent past. Part I discusses the progress that has been made in dealing with the practical issues of conserving modern buildings, with special attention given to common materials such as concrete and metal windows. A selection of international case studies provide examples of the problems that may be encountered.
