ENGLISH HERITAGE

A fifth report on Local Authority Staff Resources

**Produced by English Heritage, the Association of Local Government
Archaeological Officers and the Institute of Historic Building
Conservation
July 2013**

1. Executive Summary

- 1.1 At the beginning of 2013 there were 879.8¹ full-time equivalent (FTE) historic environment specialists providing advice to local authorities in England. This comprises:
 - 548 FTEs working on building and area conservation and
 - 332 FTEs providing archaeological advice.
- 1.2 These figures represent a continuation of a downward trend that began in 2006 which has seen numbers fall by over 28% in overall historic environment advice. This breaks down into:
 - a drop of 18% in archaeological advice (including Historic Environment Records Officers), and
 - a drop of 33% in conservation advice.
- 1.3 In the past 12 months:
 - the number of archaeological specialists advising local authorities in England has fallen by 3% and
 - the number of conservation specialists has fallen by 4%.
- 1.4 As the number of specialist advisers continues to decline, numbers of planning application decisions have remained relatively steady over the last three years (see *figure 3*). The past year has seen a small drop of 4% in planning application decisions.

2 Introduction

- 2.1 This report compares the levels of historic environment staff resources in local authorities in the early months of 2013 with those available since 2003.

¹ Numbers may not sum consistently due to rounding

- 2.2 This report has been produced by English Heritage in partnership with the Association of Local Government Archaeological Officers (ALGAO), which is the forum representing archaeologists working for local authorities and national parks and advising on all aspects of the historic environment, and the Institute of Historic Building Conservation (IHBC), which is the professional body for building conservation practitioners and historic environment experts, many of whom work in local government.
- 2.3 The data collected for this report is not limited just to those FTEs directly employed by a local authority, and so reflects the advice provided via the variety of different models of service. These alternative models include buying in advice from other organisations, such as neighbouring authorities.
- 2.4 This report updates the position recorded in its predecessor report (published in August 2012) on the changes in levels of expert staffing resources in local authorities and includes data available on the numbers of planning application decisions. The source of that data is the Department for Communities and Local Government (<http://www.communities.gov.uk/planningandbuilding/planningbuilding/planningstatistics/statisticsplanning/>) and it covers the 2012/13 financial year.

3 Local authority specialist provision

- 3.1 In early 2013 there were 879.8 FTE historic environment specialists providing expert advice to local authorities in England. This was made up of 332 providing archaeological advice and 548 providing advice on building and area conservation.
- 3.2 These figures are for permanent, temporary, and consultancy full-time equivalents. The posts are those for which a related historic environment professional or academic qualification is required and for other staff, not qualified, who are engaged on equivalent work. Administrative staff are not included. Time spent directly managing staff is counted, as it has a direct consequence for the management of the historic environment. The management time of the head of a historic environment team is therefore included, whereas that of the head of a group which includes the historic environment team is not.
- 3.3 The data was collected by ALGAO and IHBC. ALGAO has been collecting figures on local government archaeological staff resources on an annual basis since 1998; IHBC has also produced figures in 2006, 2008, 2011 and 2012, with broadly equivalent figures available from the Local Authority Conservation Provision Survey of 2003. Although there is more data for the archaeological resource, this report looks at the years for which both archaeological and building

conservation data is available. These are 2003, 2006, 2008, 2009/10, 2011, 2012 and 2013.

- 3.4 The data shows there was an overall loss of nearly 30 FTEs between the survey this year and last year's survey. This is made up of a loss of just over 20 FTEs providing conservation advice and a loss of over 9 FTEs providing archaeological advice (see *figure 1*).

NB For the benefit of a clearer graphical representation, in Figure 1 the totals 2004/05, 2005/06 and 2007/08 have been extrapolated as data was not available for those years.

- 3.5 These figures translate into an overall reduction of over 28% since they peaked in 2006. That breaks down into a drop of 18% in archaeological advice, and a drop of 33% in conservation advice. *Figure 1* highlights that while there are variations in the numbers, the trends are consistent for both archaeological and conservation advice.

4 Regional breakdown

- 4.1 The regional breakdown of the data highlights a major feature of the impact of the recent local authority budgetary cuts – that their impact and how authorities have responded to them has varied from place to place.

Figure 2 FTE data broken down by English Heritage local office area (referred to as 'regions' in previous reports)

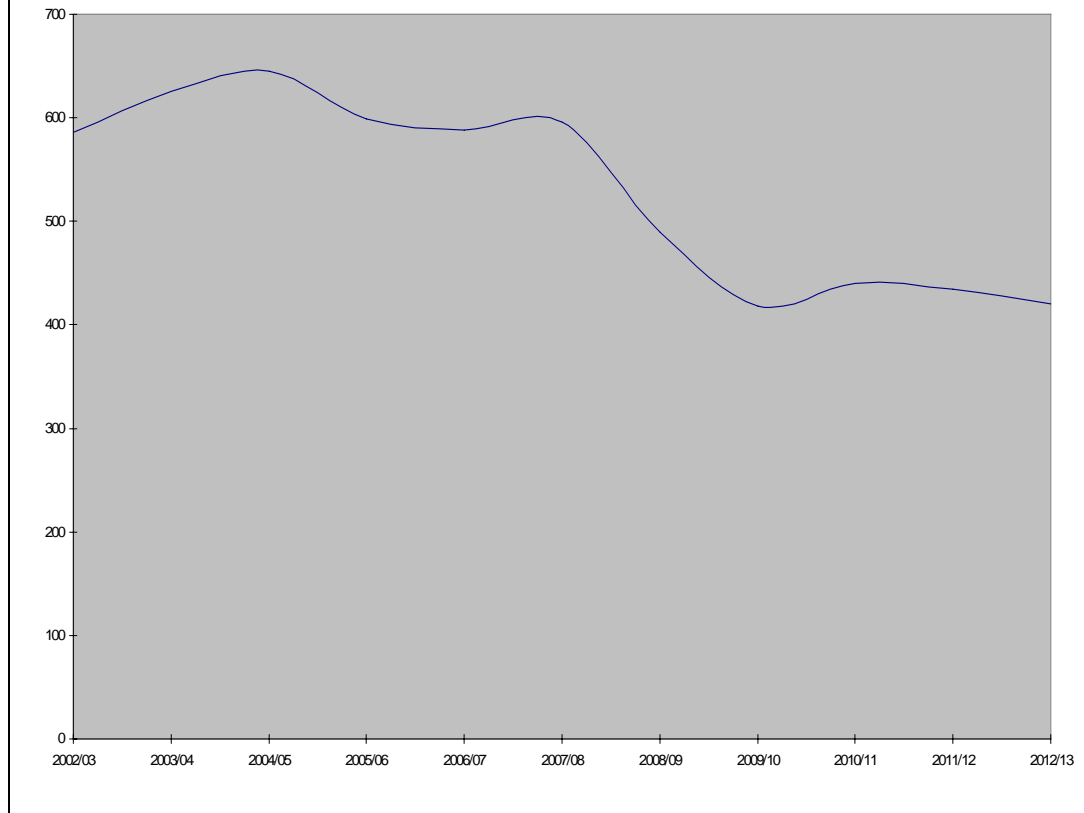

4.2 The breakdown shows that in some areas the national trend of a continuing decrease in FTEs is not followed, as numbers in a number of areas have increased slightly over the last reporting period. By comparison the numbers in South East and the South West fell by 6% and 7% respectively.

5 Planning data 2011/12

5.1 The Department for Communities and Local Government (CLG) planning data shows that the number of planning application decisions has fallen by a small amount for the second successive year (see figure 3). Unlike last year, that fall was reflected in all areas of England, with the South East seeing the largest drop (6.7%) over the previous year.
